

A WHOLE-FOOD GUIDE TO EATING FOR NATURAL FULLNESS,
STEADIER BLOOD SUGAR, AND A HEALTHIER GUT.

Foods That Naturally Support Your GLP Producing Hormones

*The everyday foods that help your body make more
of its own GLP-1 and GLP-2, no shots required.*

The Hormones You Already Make

You have probably heard about the new weight and blood-sugar medications by now. What most people never hear is this: the hormone those shots are built to copy is one your own body already makes, every single day, in your gut.

It is called GLP-1. And it has a couple of partners, GLP-2 and GIP, that work right alongside it. Together they are the reason a good meal makes you feel full, satisfied, and steady instead of hungry an hour later.

Here is the part that matters for your kitchen: **what you put on your plate is one of the levers that decides how much of these hormones your body releases.** Certain foods nudge your natural production up, gently and on your own terms. No prescription, no injection. Just food your body already knows what to do with.

This guide walks you through those foods. What they are, why they work, simple ways to use them, and a short stack of recipes that put them together. Think of it as eating in a way that works *with* your body instead of against it.

A quick, honest note before we start. Food is not a drug, and this guide is not medical advice. The natural rise you get from a great meal is real, but it is gentle and brief, nothing like the dose in a medication. So we are not here to promise you will "skip the shot." We are here to help you build a way of eating that supports your own hormones, your fullness, and your energy. If you are on or considering any GLP-1 medication, keep talking with your healthcare provider. Food and good habits sit alongside that conversation, they do not replace it.

The one big idea: GLP-1 and GLP-2 are made in your gut in response to food. Feed your gut the right things, in the right order, and you help it do more of what it is already built to do.

How Food Moves These Hormones

Your intestine is lined with special cells (the experts call them L-cells) that release GLP-1 and GLP-2 when they sense food. Three things on your plate flip that switch the hardest:

1. Protein. This is the most reliable trigger of all. Protein-rich foods signal fullness fast and steady your blood sugar. Dairy protein is especially well studied, partly because the calcium that rides along with it makes the effect even stronger.

2. Fiber that feeds your gut. The soft, soluble fiber in oats, barley, beans, and many vegetables is not digested up top. It travels down to your gut bacteria, which ferment it into tiny compounds called short-chain fatty acids. Those compounds are a direct "release now" signal for **both GLP-1 and GLP-2**. This is also the main way food helps keep your gut lining healthy, which is GLP-2's whole job.

3. The right kind of fat. Fat is a strong trigger too, but the type matters. In head-to-head studies, the good fat in olive oil beat butter for raising these hormones. So this is about leaning toward olive oil, avocado, and nuts, not piling on fat everywhere.

And two free levers that cost you nothing:

4. Eat your protein and veggies before your carbs. Same meal, same food, bigger hormone response, just from the order.

5. Slow down and actually chew. Eating slower and chewing your food (whole, not blended to mush) raises GLP-1 more. Your gut needs a moment to notice the meal.

That is the whole playbook. The rest of this guide is just showing you which foods do it best, and how to make them taste good enough to keep eating.

PART ONE · THE DIRECT DRIVERS

The Foods That Do It Directly

Everyday, grocery-store foods that trigger your hormones head-on.

01 Meats & Seafood

WELL STUDIED

Salmon, white fish, chicken, turkey, lean beef.

High-quality protein is the most dependable natural trigger for GLP-1, and fatty fish like salmon add healthy fats that support the signal even more. Protein also does the quiet work of protecting your muscle while you eat lighter.

SIMPLE USES Grill or bake and slice over greens. Keep a rotisserie chicken in the fridge for fast protein. Have your protein bite first, before the starch on your plate.

In the recipes: salmon cakes, sheet-pan roasted chicken, turkey burgers.

02 Eggs

WELL STUDIED

Whole eggs and egg whites.

Eggs pair protein with a little healthy fat, a combo shown to lower after-meal blood sugar and cut hunger for hours. One of the easiest wins in the whole guide.

SIMPLE USES Scramble with a handful of spinach, hard-boil a batch for the week, or bake into egg muffins. See the recipes for ways to keep eggs from getting boring.

03 Whole Grains

SUPPORTIVE

Oats and barley (rich in a soluble fiber called beta-glucan).

Beta-glucan is exactly the kind of fiber your gut bacteria ferment into those hormone-releasing compounds. It also slows digestion, so you stay full and your blood sugar stays steady. Barley is the quiet star here, with even more beta-glucan than oats.

SIMPLE USES Overnight oats with chia, or swap barley in for rice in a pilaf or soup.

In the recipes: barley summer salad, overnight protein oats.

04 Whey & Dairy

WELL STUDIED

Greek yogurt, kefir, whey protein isolate.

Dairy protein is one of the single best-studied GLP-1 triggers, and the calcium that comes with it makes the effect stronger. A small protein drink about fifteen minutes before a bigger meal works as a "primer" that sets your fullness up in advance.

SIMPLE USES Plain Greek yogurt topped with berries and chia, a protein shake before lunch, or homemade kefir.

In the recipes: homemade kefir, Greek yogurt protein pudding.

05 Legumes

SUPPORTIVE

Lentils, chickpeas, black beans.

Beans are a two-for-one. They bring slow-digesting fiber your gut ferments into GLP-1 and GLP-2 signals, plus plant protein that adds to the effect, all from the same food.

SIMPLE USES Simmer lentils into soup, roast chickpeas for a crunchy snack, fold black beans into tacos or grain bowls.

In the recipes: lentil soup, black bean and sweet potato burritos.

06 Seeds

EMERGING

Chia and flax.

These little seeds are loaded with soluble fiber that gels, slows digestion, and feeds the gut-hormone pathway. Flax has to be ground for you to get the benefit.

SIMPLE USES Stir a spoonful into yogurt, oats, or a smoothie, or make chia pudding.

In the recipes: overnight protein oats (chia), coconut chia pudding variation.

07 Fermented Foods

EMERGING

Yogurt, kefir, kimchi, sauerkraut.

Fermented foods feed a healthier, more diverse gut community, and a happier gut ferments fiber better, which means more of those hormone-releasing compounds. The science here is promising and still growing, so think of these as strong supporting players that build the environment your hormones are made in.

SIMPLE USES A forkful of kimchi or sauerkraut as a side with any meal, kefir in a smoothie.

Make your own: see the DIY ferments box near the back for homemade yogurt, kefir, and kimchi.

08 Plant Oils & Fruits

WELL STUDIED

Extra-virgin olive oil and avocados.

The good fat in olive oil beat butter head-to-head for raising these hormones, and it slows your stomach so fullness lasts longer. Avocado brings that same good fat plus fiber, and studies show adding it to breakfast lifts GLP-1.

SIMPLE USES Drizzle olive oil over vegetables or salad instead of butter, half an avocado on whole-grain toast.

09 Nuts

SUPPORTIVE

Almonds, walnuts, pistachios.

Nuts combine fat, fiber, and protein, which together give you a slow, steady, fullness-friendly release. Pistachios in particular have been shown to raise GLP-1.

SIMPLE USES A small handful as a snack, chopped over yogurt or oats.

In the recipes: build-your-own snack bags.

10 Omega-3 Sources

SUPPORTIVE

Fatty fish like mackerel and sardines.

These bring the same protein-plus-healthy-fat one-two punch as salmon, in a shelf-stable, budget-friendly form. An easy way to get a hormone-supporting meal on the table in minutes.

SIMPLE USES Tinned mackerel on whole-grain toast, sardines and eggs in a quick tomato breakfast.

In the recipes: sardines and eggs tomato breakfast.

PART TWO · THROUGH YOUR GUT

The Foods That Do It Through Your Gut

*Feed your gut bacteria the right fibers,
and they release your hormones for you.*

Your Gut's Secret Weapon

Here is where it gets interesting. Some foods do not trigger your hormones directly at all. Instead they feed the bacteria in your gut, and *those* bacteria do the work for you.

When you eat certain fibers and starches, your gut bacteria ferment them into short-chain fatty acids (compounds with names like butyrate, acetate, and propionate). Those compounds are one of the strongest natural signals telling your gut to release GLP-1 and GLP-2. So the better you feed your gut, the more it feeds you back.

THE PREBIOTIC AND RESISTANT-STARCH ALL-STARS:

- Green (slightly under-ripe) bananas
- Cooked and cooled potatoes
- Cooked and cooled rice
- Oats
- Jerusalem artichokes
- Onions
- Garlic
- Asparagus
- Chicory root

THE COOL-DOWN TRICK (YOUR GUT'S SECRET WEAPON)

This is the one nobody tells you. When you cook potatoes or rice and then **cool them in the fridge**, some of their starch changes into what is called *resistant starch*. Instead of digesting fast up top and spiking your blood sugar, it survives all the way to your gut bacteria, who turn it into those hormone-releasing compounds.

Cooled is best. Eating them cold gives you the most resistant starch and the gentlest blood-sugar response. And here is the good news: even if you gently reheat them, you keep a good chunk of the benefit. So cook a big batch, cool it overnight, and you are set.

Who actually wants to eat cold potatoes and rice, though? Nobody. That is why we built two recipes around the cooled versions that taste great: an **avocado-oil potato salad** and a creamy **stevia rice pudding**. Turn to the recipes to make resistant starch delicious.

PART THREE · THE FORMULA

The GLP Plate

One simple plate you can build for any meal.

Build The GLP Plate

You do not need to memorize any of this. The whole guide boils down to one simple plate you can build for any meal:

Protein + Healthy Fat + Fiber

Hit all three and you give your body the biggest natural nudge it can get from a single meal. Protein and fiber trigger the hormones, the good fat stretches your fullness, and together they keep your blood sugar smooth.

FIVE PLATES THAT NAIL THE FORMULA:

- 1 Grilled salmon + roasted vegetables + quinoa
- 2 Greek yogurt + berries + walnuts
- 3 Eggs + avocado + oatmeal
- 4 Lentil soup + a drizzle of olive oil + a side salad
- 5 Chicken breast + broccoli + sweet potato

Build your plate this way most of the time, eat your protein and veggies before your carbs, slow down and chew, and you are doing the real work. Everything else is details.

THE RECIPES

Twelve Simple Recipes

Built around protein, fiber, and healthy fat. No specialty store, no chef skills.

RECIPE 01 / 12

SERVES 4

Salmon Cakes

Protein and omega-3 fats from the salmon, plus a little fiber from the binder. Batch-friendly and freezer-friendly.

280
CAL

26g
PROTEIN

9g
CARBS

16g
FAT

Ingredient	Amount
Canned or cooked salmon, drained	2 cans (about 15 oz)
Egg	1
Rolled oats (or almond flour)	1/3 cup
Dijon mustard	1 tbsp
Green onion, chopped	2
Lemon, zest and juice	1/2
Salt and pepper	to taste
Extra-virgin olive oil, for the pan	1 tbsp

METHOD

- 1

Flake the salmon into a bowl and mix in the egg, oats, mustard, green onion, lemon, salt, and pepper.
- 2

Form into 8 small patties and press firm.
- 3

Warm the olive oil in a pan over medium heat.
- 4

Cook the cakes 3 to 4 minutes a side, until golden and set.
- 5

Serve over greens with a squeeze of lemon.

RECIPE 02 / 12

SERVES 4

Sheet-Pan Roasted Chicken & Vegetables

Clean protein plus a tray of fiber-rich, gut-feeding vegetables. One pan, one cleanup.

340
CAL

38g
PROTEIN

18g
CARBS

13g
FAT

Ingredient	Amount
Chicken thighs or breasts	1.5 lb
Broccoli florets	3 cups
Red onion, wedged	1
Bell peppers, sliced	2
Extra-virgin olive oil	2 tbsp
Garlic powder, paprika, salt, pepper	1 tsp each

METHOD

- 1 Heat the oven to 425F.
- 2 Toss the chicken and vegetables with olive oil and the seasonings on a sheet pan.
- 3 Spread in one layer.
- 4 Roast 25 to 30 minutes, until the chicken is cooked through and the edges of the veg are browned.
- 5 Rest 5 minutes and serve.

RECIPE 03 / 12

SERVES 4

Turkey Burgers

Lean protein with a hidden handful of veg for fiber. Skip the bun or use a whole-grain one and load the plate with salad.

250
CAL

30g
PROTEIN

6g
CARBS

12g
FAT

Ingredient	Amount
Ground turkey (93% lean)	1.25 lb
Grated zucchini, squeezed dry	½ cup
Egg	1
Garlic, minced	2 cloves
Dijon mustard	1 tbsp
Salt and pepper	to taste
Extra-virgin olive oil, for the pan	1 tbsp

METHOD

- 1

Mix everything in a bowl and form 4 patties.
- 2

Warm the olive oil in a pan over medium heat.
- 3

Cook 5 to 6 minutes a side, until cooked through.
- 4

Serve over greens or on a whole-grain bun with avocado.

RECIPE 04 / 12

SERVES 4

Barley Summer Salad

Barley is one of the best beta-glucan fibers there is, and here it soaks up olive oil and lemon. Make it ahead, it gets better cold.

300
CAL

9g
PROTEIN

42g
CARBS

12g
FAT

Ingredient	Amount
Pearl barley, cooked and cooled	3 cups
Cucumber, diced	1
Cherry tomatoes, halved	1 cup
Red onion, finely diced	¼ cup
Fresh parsley and mint, chopped	½ cup
Feta, crumbled (optional)	⅓ cup
Extra-virgin olive oil	3 tbsp
Lemon juice	2 tbsp
Salt and pepper	to taste

METHOD

- 1 Cook the barley per the package, then cool it fully (this builds resistant starch too).
- 2 Toss with the cucumber, tomatoes, onion, and herbs.
- 3 Whisk the olive oil, lemon, salt, and pepper, and fold through.
- 4 Top with feta if using. Serve cold.

RECIPE 05 / 12

SERVES 1

Overnight Protein Oats

Beta-glucan oats plus chia for soluble fiber, plus a scoop of protein to hit all three levers in one jar. Make it the night before.

380

CAL

28g

PROTEIN

45g

CARBS

10g

FAT

Ingredient	Amount
Rolled oats	½ cup
Chia seeds	1 tbsp
Vanilla protein powder	1 scoop
Milk or kefir	¾ cup
Plain Greek yogurt	¼ cup
Berries	½ cup
Cinnamon	pinch

METHOD

- 1

Stir the oats, chia, protein powder, milk, and yogurt in a jar until smooth.
- 2

Cover and refrigerate overnight.
- 3

In the morning, top with berries and cinnamon.

Coconut chia pudding variation: skip the oats and protein powder, use 3 tbsp chia seeds in 1 cup coconut milk with a little stevia and vanilla. Stir, chill overnight, top with fruit.

RECIPE 06 / 12

MAKES ABOUT 4 CUPS

Homemade Kefir

Fermented dairy brings probiotics for your gut plus protein and calcium for the direct hormone signal. Cheaper than store-bought once you have the grains.

Where to get grains: look for "live kefir grains" from a well-reviewed online culture shop, or ask a friend who already brews (they multiply, so people share).

Ingredient	Amount
Milk (whole or 2%)	4 cups
Live kefir grains	1 to 2 tbsp

METHOD

- 1 Add the kefir grains to a clean glass jar and pour in the milk.
- 2 Cover with a cloth and a rubber band (it needs to breathe, not seal).
- 3 Leave on the counter, out of direct sun, 18 to 24 hours, until it smells tangy and thickens.
- 4 Strain out the grains (save them for the next batch) and refrigerate the kefir.
- 5 Blend with fruit to serve. Good combos: blueberries with a touch of stevia, or mango.

RECIPE 07 / 12

SERVES 2

Greek Yogurt Protein Pudding

A dessert that is really a GLP-1 primer. Dairy protein plus whey plus calcium, in a spoonable treat.

240
CAL

32g
PROTEIN

14g
CARBS

5g
FAT

Ingredient	Amount
Plain Greek yogurt	1½ cups
Vanilla or chocolate protein powder	1 scoop
Milk, to loosen	2 to 4 tbsp
Cocoa powder (optional)	1 tbsp
Granulated stevia sweetener	to taste
Berries or chopped nuts, to top	as desired

METHOD

- 1 Whisk the yogurt, protein powder, and cocoa if using, adding milk a splash at a time until it is smooth and thick like pudding.
- 2 Sweeten to taste with stevia.
- 3 Chill 20 minutes.
- 4 Top with berries or a few chopped nuts.

RECIPE 08 / 12

SERVES 6

Lentil Soup

Lentils are the fiber-plus-plant-protein double play, simmered into a bowl that feeds your gut bacteria and fills you up for hours.

260
CAL

15g
PROTEIN

38g
CARBS

6g
FAT

Ingredient	Amount
Dry brown or green lentils, rinsed	1½ cups
Extra-virgin olive oil	2 tbsp
Onion, diced	1
Carrots, diced	2
Celery, diced	2 stalks
Garlic, minced	3 cloves
Cumin and smoked paprika	1 tsp each
Crushed tomatoes	1 can (14 oz)
Vegetable or chicken broth	6 cups
Spinach or kale	2 cups
Salt, pepper, lemon	to taste

METHOD

- 1 Warm the olive oil in a pot and soften the onion, carrots, and celery, about 6 minutes.
- 2 Stir in the garlic and spices for a minute.
- 3 Add the lentils, tomatoes, and broth. Bring to a boil, then simmer 30 to 35 minutes until the lentils are tender.
- 4 Stir in the greens until wilted.
- 5 Finish with salt, pepper, and a squeeze of lemon. A drizzle of olive oil on top adds fullness.

RECIPE 09 / 12

MAKES 6 BURRITOS

Black Bean & Sweet Potato Burritos

Black beans bring gut-feeding fiber and protein, sweet potato adds more fiber, and rolling them together makes a batch you can freeze.

340

CAL

14g

PROTEIN

52g

CARBS

9g

FAT

Ingredient	Amount
Sweet potatoes, diced small	2
Extra-virgin olive oil	1 tbsp
Black beans, drained	2 cans
Cumin, chili powder, garlic powder	1 tsp each
Whole-grain tortillas	6
Shredded cheese (optional)	¾ cup
Avocado and salsa, to serve	as desired

METHOD

- 1

Heat the oven to 425F. Toss the sweet potato with olive oil and roast 20 to 25 minutes.
- 2

Warm the black beans with the spices in a pan, mashing lightly.
- 3

Fill each tortilla with beans, sweet potato, and a little cheese.
- 4

Roll up and press seam-down in a hot dry pan for a minute a side to crisp.
- 5

Serve with avocado and salsa, or wrap and freeze for later.

RECIPE 10 / 12

SERVES 2

Sardines & Eggs Tomato Breakfast

Omega-3 fats and protein from the sardines, more protein from the eggs, all in a savory tomato base. A five-minute hormone-supporting start.

320
CAL

27g
PROTEIN

10g
CARBS

20g
FAT

Ingredient	Amount
Extra-virgin olive oil	1 tbsp
Garlic, sliced	2 cloves
Cherry tomatoes, halved	2 cups
Tinned sardines in olive oil, drained	1 tin
Eggs	4
Paprika, salt, pepper	to taste
Fresh parsley, whole-grain toast	to serve

METHOD

- 1 Warm the olive oil and garlic in a pan, then add the tomatoes and cook until they slump, about 5 minutes.
- 2 Nestle in the sardines.
- 3 Crack in the eggs, cover, and cook until the whites set.
- 4 Season, scatter parsley, and serve with whole-grain toast.

RECIPE 11 / 12

SERVES 6

Avocado-Oil Cooled Potato Salad

This is the cool-down trick in action. Cooking and cooling the potatoes builds resistant starch that feeds your gut hormones, and the avocado oil dressing brings the good fat.

210
CAL

4g
PROTEIN

27g
CARBS

10g
FAT

Ingredient	Amount
Baby potatoes, cooked and fully cooled	2 lb
Celery, diced	2 stalks
Red onion, finely diced	¼ cup
Fresh dill and chives, chopped	¼ cup
Avocado-oil mayonnaise	⅓ cup
Dijon mustard	1 tbsp
Apple cider vinegar	1 tbsp
Granulated stevia sweetener	1 tsp
Salt and pepper	to taste

METHOD

- 1

Boil the potatoes until just tender, then drain and refrigerate at least 4 hours or overnight (this is what builds the resistant starch).
- 2

Halve the cooled potatoes into a bowl with the celery, onion, and herbs.
- 3

Whisk the avocado-oil mayo, mustard, vinegar, stevia, salt, and pepper.
- 4

Fold the dressing through gently.
- 5

Serve cold. Keeps 3 days.

RECIPE 12 / 12

SERVES 4

Stevia Rice Pudding

The other half of the cool-down trick. Cooked, cooled rice carries resistant starch, and here it becomes a creamy dessert sweetened with stevia so your blood sugar stays calm.

220
CAL

6g
PROTEIN

34g
CARBS

7g
FAT

Ingredient	Amount
Cooked rice, cooled overnight	2 cups
Milk (dairy or coconut)	2 cups
Granulated stevia sweetener	3 to 4 tbsp
Vanilla extract	1 tsp
Cinnamon	½ tsp
Egg (optional, for richness)	1
Pinch of salt	1

METHOD

- 1 Cook your rice ahead and cool it in the fridge overnight.
- 2 Add the cooled rice, milk, stevia, vanilla, cinnamon, and salt to a pot.
- 3 Simmer gently, stirring often, 15 to 20 minutes until creamy.
- 4 If using the egg, whisk it with a splash of the warm milk first, then stir in off the heat so it thickens without scrambling.
- 5 Cool slightly. Delicious warm, and even better chilled the next day (more resistant starch).

Make Your Own Ferments

Store-bought works, but making your own is cheaper and lets you skip the added sugar.

Homemade yogurt: heat 4 cups of milk to just below a boil, cool it to warm (about 110F), whisk in 2 tbsp of plain yogurt with live cultures, then keep it warm (an oven with the light on works) for 6 to 8 hours until set. Chill. Strain through cloth for thick Greek-style.

Homemade kimchi: salt 1 chopped napa cabbage for 1 to 2 hours, rinse, then toss with grated garlic, ginger, a little chili flake, green onion, and a splash of fish sauce. Pack tight into a jar, press down so the liquid covers it, and leave on the counter 2 to 4 days, tasting daily, then refrigerate.

Homemade kefir: see recipe 6.

The Master Grocery List

Proteins: salmon (fresh or canned), sardines, mackerel, chicken, turkey, lean beef, eggs

Dairy: plain Greek yogurt, kefir, milk, feta

Pantry protein: whey or plant protein powder

Grains: rolled oats, pearl barley, whole-grain tortillas, brown rice

Legumes: lentils, black beans, chickpeas

Seeds & nuts: chia, ground flax, almonds, walnuts, pistachios

Fruit: berries, apples, pears, bananas (a little green), lemon

Vegetables: broccoli, Brussels sprouts, cabbage, bell peppers, onion, garlic, asparagus, spinach, kale, celery, carrots, cucumber, tomatoes, baby potatoes, sweet potato

Good fats: extra-virgin olive oil, avocado-oil mayonnaise, avocados

Ferments: kimchi, sauerkraut

Extras: stevia sweetener, Dijon mustard, cinnamon, vanilla, herbs

The GLP Foods Cheat-Sheet

Stick this on the fridge.

EAT MOST DAYS:

- A protein at every meal (eggs, fish, poultry, Greek yogurt, beans)
- A soluble fiber daily (oats, barley, beans, chia)
- Olive oil or avocado instead of butter
- A prebiotic or two (onion, garlic, asparagus, slightly green banana)
- A forkful of something fermented (kimchi, kefir, sauerkraut)

THE FREE HABITS:

- Protein and veggies first, carbs last
- Slow down, chew your food
- Cook rice and potatoes ahead and cool them (the resistant-starch trick)

SKIP THE HYPE:

- No single food is a shot in a bowl. Ignore any pill or powder promising "natural Ozempic." Real food, real habits, done consistently. That is the whole game.

Make It Stick

You do not have to overhaul your kitchen this week. Pick two or three things from this guide and make them automatic.

Start here:

- 1 Add a real protein to every breakfast.
- 2 Cook a batch of barley or beans on Sunday.
- 3 Swap butter for olive oil, and eat your protein before your carbs.

Do that consistently and you are already working with your body's own hormones, no prescription required. Small plates, repeated often, beat a perfect plan you cannot keep.

Here is to eating in a way that finally feels like it is on your side.

BEFORE YOU GO

A Little Extra Support

Food does the heavy lifting. On the days life gets loud and the schedule wins, a little support makes the habits in this guide easier to keep. Two ORYGN products are built for exactly that.

triGLP

DROPS · GLP-1, GLP-2 AND GIP

The same three pathways this whole guide is about, in one drop. triGLP is made to support your body's own GLP-1, GLP-2, and GIP: appetite, gut health, and steady blood sugar. No injection, no synthetic hormones.

IGNYT

POWDER · ONE SACHET, ONCE DAILY

A daily metabolic drink you stir into a glass of water, ideally in the morning. Built for clean, sustained energy with no stimulant crash and no injection.

YOUR NEXT STEP

Reach Back Out

*This guide was shared with you by
someone who can help you go further.*

Reach back out to the person who sent it to you. They can get you started with triGLP and IGNYT, answer your questions, and help you turn these foods and habits into a routine that actually sticks.

You do not have to do this alone. That is the whole point of having someone in your corner.

A NOTE ON THIS GUIDE

This guide is for general education and is not medical advice, a diagnosis, or a treatment plan. Food supports your body's natural hormone production gently, and it is not a substitute for any medication or for care from a qualified professional. If you are on or considering a GLP-1 medication, are pregnant, or manage a health condition, talk with your healthcare provider before making big changes to how you eat.
